

Task 5

Given the datasets `titanic.csv` and `titanic2.csv`, please try to address the following questions with what you've learnt about data wrangling.

1. Combining the two datasets along the vertical direction.
2. Creating 2 indexes with **Sex** and **Pclass** variables.
3. Exchanging the order of the levels for the 2 indexes you created in question 2.
4. Sorting the data with the index **Pclass** and **Sex**.
5. Getting the mean and standard deviation respectively for all the variables collapsed by indexes **Pclass** and **Sex**.
